What We Do

Team Augmentation

A team of 4000+ Battle Tested engineers across 100+ Different Stacks.

We are your Digital Factory, dedicated teams to supercharge your development throughput.

0 Operational Overheads.

Agile & On Demand.

Fixed Scope

We offer meticulously crafted project specifications and timelines for cutting-edge development, seamless integrations and feature-rich solutions.

The NeoSOFT approach ensures your projects are delivered with precision and excellence.

Managed Services

Our IMS services helps enterprises to run Business as usual.

With strong SLA driven services, 24x7 Support, Governance and Technology expertise, we help to optimize processes and costs.

A doctor in a white coat is using a tablet. The tablet screen displays a complex interface with various data points, charts, and text, typical of an Electronic Medical Record (EMR) or Electronic Health Record (EHR) system. The doctor's hand is visible, pointing at the screen. The background is a blurred clinical setting.

EMR/EHR

A Reputed Chain Of Hospitals

Designed an EMR system to administer patient's medical records & procedures.

EMR System

Data Interaction

Automation

ERP

**Increased
Accessibility**

**Optimized
Workflows**

**Improved
Management**

Solutioning

Challenges

- The client desired to create a time-saving system to manage all medical records, appointments, prescriptions to improve accessibility.
- Creating family history modules based on doctors speciality and patients history.
- Lack of visual aids such as graphs and charts to present patient information.

Technical Spotlight

- Leveraged Node.js along with Express framework to build an intuitive web application that handles requests and responses quickly.
- Utilized MongoDB with mongoose package module for its database.
- Leveraged Angular 4 with a material designed theme to develop dynamic web pages for the front-end framework

Solution Highlights

- Purpose of this project was diagnose patients based on their medical records.
- Managed all records of the patient against each appointment he/she has taken in a clinic.
- Created vitals charts of a patient based on its previous appointment details using Chart.js.
- Based on these data (vitals, family history, allergies, ob history etc) the clinic/doctor prescribed medicine or procedure to a patient.

Florida's Largest Therapy Service Provider

Created an EMR solution to help facilitate the communication between the patient and the therapists.

Process Optimization

Data Integration

Data Security

EMR

**Improved Patient
Safety**

**Increased
Efficiency**

**Better
Communication**

Solutioning

Challenges

- Difficulty implementing an EMR solution as it requires planning, resources, and time. It can involve migrating data from paper-based systems, training staff, and ensuring that the system is compatible with existing hardware and software.
- Challenge sharing data and information between different systems and can result in fragmented data and poor communication between providers.
- No proper assimilation of real-time data, subsequently yielding incomplete/incorrect analytical reports.

Technical Spotlight

- Leveraged ASP.NET MVC 5 for its powerful and versatile framework which is also flexible and allows developers to create dynamic applications.
- Utilized C# to develop robust and scalable software applications.
- Integrated third party software component DayPilot Calendar to create interactive web-based calendars and scheduling applications.

Solution Highlights

- Deliver a new dynamic, scalable application that supports functionalities and architecture of current business model which evolves in alignment with client's offline workflow requirements.
- A solution with rich calendar functions for scheduling appointments.
- A web portal that encapsulates services and other vital data from the back end to provide accurate and updated information at the front end to facilitate seamless patient treatment tracking, patient insurance, provider's payment, and account related information.

The First, Fully Automated Diagnostic Laboratory

Introduced automation in publishing the patient's hematology report by building up a flawless architecture and communication between the device, server and the report publishing system.

Data Consolidation

UI/UX Engineering

EMR

Database Management

**Enhanced Research
Capabilities**

**Increased Patient
Engagement**

**Streamlined
Documentation**

Solutioning

Challenges

- Increased risk of errors associated with manual record-keeping.
- The Pathology department followed the process of manually registering patient details in the hospital records. This was further added in the Hematology daily register manually, and other internal records.
- The entire process was time-consuming and had high chances of human errors.

Technical Spotlight

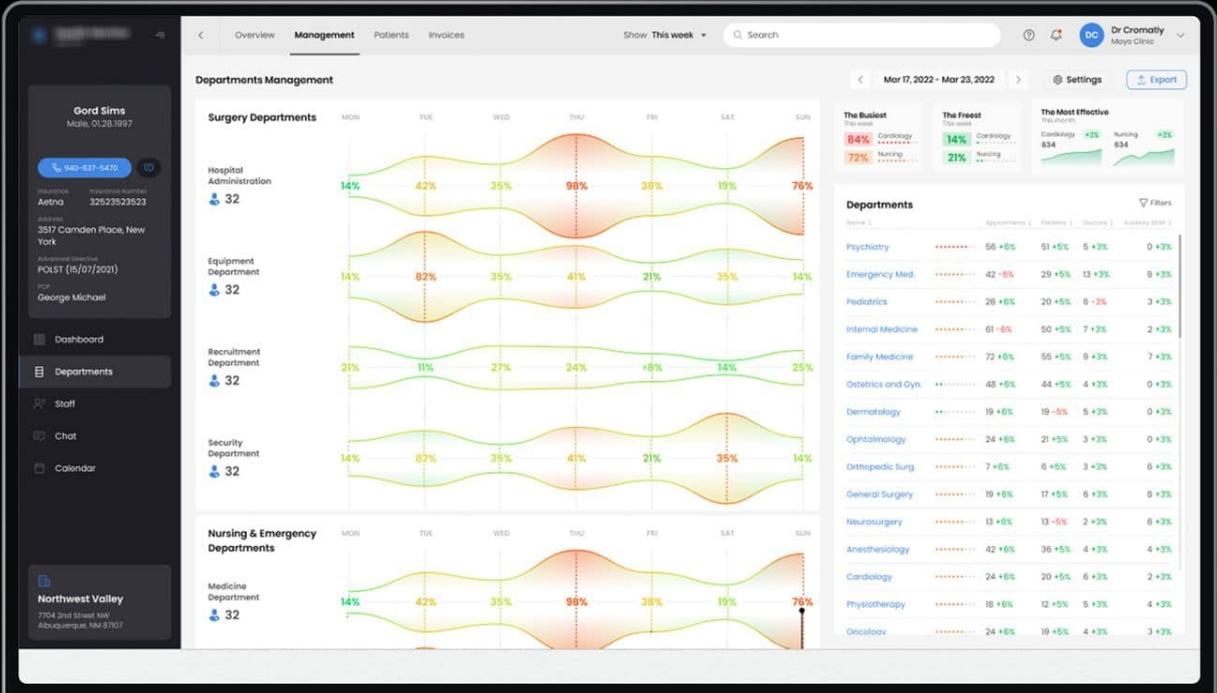

- Leveraged PHP for its ease of use, flexibility, and versatility to build dynamic and scalable web applications.
- Utilized MYSQL to store structured data in tables with predefined schemas and manage the database ecosystem.
- Leveraged Python as SDK integration to fetch and store data and create alerts that trigger that device.

Solution Highlights

- Created an ERP server which proved to be a smart and effective solution, resulting in a reduction of almost 60-70% of the workload in all the labs.
- Every single finding is captured and collated for each user, ensuring the highest accuracy benchmarks. Thereby, eliminating the chances of any errors caused due to human intervention.
- Reports are generated in a standard format with zero errors using the application developed.

Solutioning

Challenges

- Had to maintain patient records manually.
- Absence of a system to promptly update patients of important developments.
- Checking the availability of doctors and scheduling appointments manually was extremely time consuming.

Technical Spotlight

- Leveraged PHP to design an interactive and dynamic interface.
- Utilized Ajax to improve page speed and web application response time.
- Used MongoDB for storing and managing large volumes of data.
- Used HTML and CSS for an intuitive website design.

Solution Highlights

- We developed a strong and intuitive web portal to manage user records, patient records, doctor schedules and related appointments.
- Integrated a repository pattern for the ease of development and established an UI design with CRUD operations for different users.
- Schedule and track appointment through the application.
- Informative charts & graphs to accurately present medical data to doctors and patients.
- Reporting and analysis on sample collection & payments.

A Leading Institution Offering Comprehensive Renal Diagnosis & Treatment

Engineered a Digital Product to plan all operations and manage all patient and staff records with updates in real-time.

Data Analytics

UI/UX Engineering

Data Encryption

Process Automation

Efficient database management

Easy Resource Availability

Versatile tool access

Solutioning

Challenges

- Manual methods to maintain patient records.
- Lack of system that could send timely updates to patients and keep them informed of important updates.
- Difficulty for users to check doctors' availability and book clinic appointments manually consumed a lot of time.

Technical Spotlight

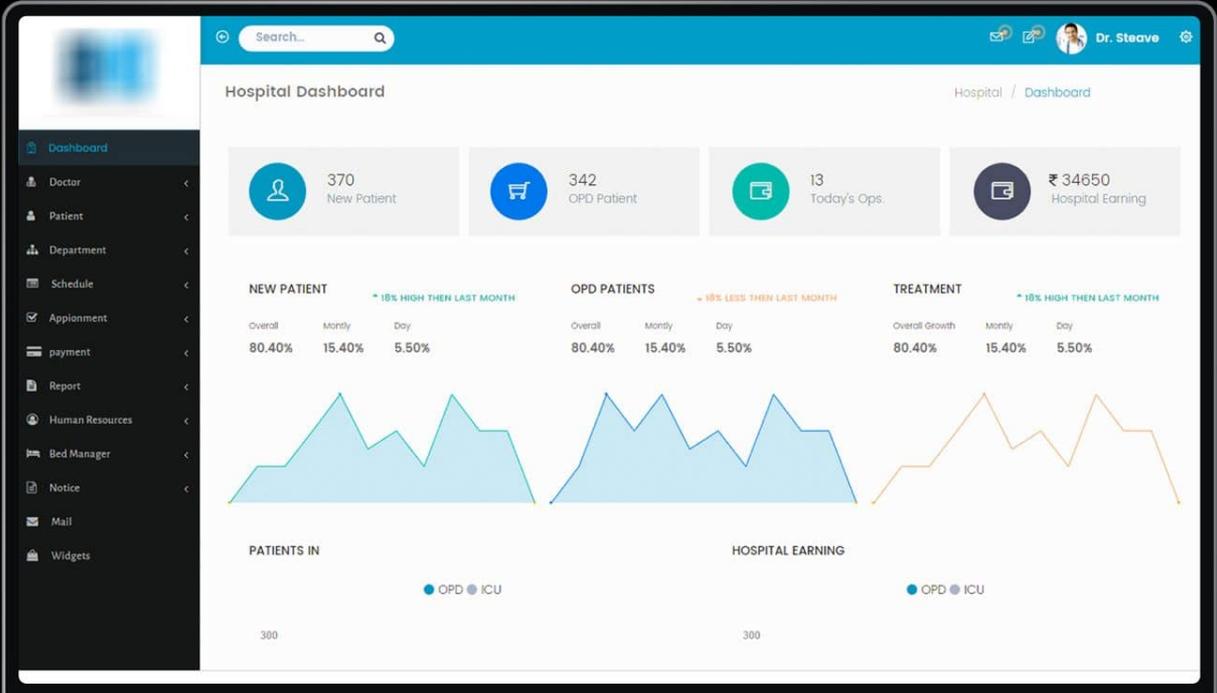

- Leveraged .NET MVC to build the web application as it provides developers with a powerful set of tools and features to build robust and scalable web applications.
- Leveraged HTML and CSS to enable developers to create visually appealing and interactive web pages that can be accessed by users through a web browser.
- Used MSCharts to create and display a range of interactive charts and graphs chart types, including line charts, bar charts, pie charts, and more.

Solution Highlights

- Implemented a user-friendly interface and clear navigation which makes it easy for healthcare providers to access and use.
- Efficient database management that helps access reports and test results, and other key metrics, which can help healthcare providers make informed decisions about patient care.
- Integrated compatibility with a wide range of devices to ensure that healthcare providers can use it regardless of their device preferences.

Accurate Geolocation

Solutioning

Challenges

- Ensuring the accuracy and reliability of the application to ensure that healthcare providers can make informed decisions about patient care.
- Guarantee accuracy of geolocation to enable a wide range of services.
- Integrate automation that can help streamline the database.

Technical Spotlight

- Leveraged TypeScript - open source high-level programming language - enhance the development experience of the web portal by making it easier to maintain and scale large codebases.
- Using HTML and CSS, developers were able to construct aesthetically attractive and dynamic web pages that consumers could access via a web browser.
- Leveraged Redux - an open-source JavaScript library for managing and centralizing application state - to build scalable and maintainable user interfaces.

Solution Highlights

- Geolocation feature to help easily locate and contact the nearest collection center.
- Dynamic and interactive interface with easy navigation streamlined user access.
- Robust security features protect confidential patient data to keeps it secure.

Global Life Sciences Leader In Diagnostics & Drug Development

Developed a futuristic ERP to simplify business operations.

Process Automation

ERP

Project Engineering

UI/UX

**Increased Business
Efficiency**

**Improved Report
& Planning**

**Enhanced
Communication**

Solutioning

Challenges

- Many workflow problems occur due to the lack of a centralized process.
- Took too long to gather drug-related information from a standard system since various software systems had to be accessed.
- The client wants to eliminate stumbling blocks in order to improve decision-making.

Technical Spotlight

- Leveraged Core Java - the base foundation of the Java programming language - to develop the web application that runs on a server and can be accessed via a web browser.
- JavaScript is a crucial technology for developing enterprise resource planning. It's a programming language that allows developers to create bespoke solutions and automate administrative operations within an ERP system.
- Java Hibernate was used to minimize lines of code by preserving object-table mapping and returning results to the application in the form of Java objects.

Solution Highlights

- Centralizing processes reduced duplication of effort and streamlined workflows, that can improve efficiency and productivity.
- Improved communication among the departments by creating clear lines of communication and ensuring faster decision making.
- Increase transparency by providing stakeholders with access to real-time data and analytics.

Digitally Transforming a US Life-Science Company

Established a cross-platform application for monitoring, managing and executing clinical trials for upcoming drugs in the market.

Product Engineering

DevOps

Database Management

Data Science

30%

**Increased
Efficiency**

40%

**Reduced
Overall Costs**

25%

**Boosted
Productivity**

Solutioning

Challenges

- Absence of a dedicated system for managing and scheduling clinical trials.
- Lack of a method for collating data collected from the trials to derive accurate insights.
- No method in place for selecting the drugs suitable for being used in human trials for the next stage and identifying individuals that will be ideally suited for testing.

Technical Spotlight

- Built the software applications mainly using Java and Spring, ensuring coding standards and best practices are followed.
- Integrated a CI/CD pipeline to derive meaningful and actionable insights from clinical trial data.
- Leveraged MySQL to store and access clinical data quickly as well as to boost the security of the application.

Solution Highlights

- Clinicians can instantly and seamlessly access clinical trial data in real-time with data visualizations and graphs.
- Successful drug trials can be seamlessly moved on to next stage of the trial.
- Automated processes and data driven insights decreased time typically spent on manual processing ensuring quicker time to market.

**Intuitive User
Interface**

Solutioning

Challenges

- Integrating CMS with existing systems needs to be able to work seamlessly avoiding disruptions.
- Absence of a visually appealing UI/UX design.
- Learning curve and initial resistance from team members who may be used to working with other tools or processes.

Technical Spotlight

- Leveraged PHP to build a user-friendly and dynamic website and its cross-platform compatibility.
- Utilized WordPress for its ease-of-use, and accessibility to add features and functionalities using plugins and themes.
- Leveraged MySQL - a popular open-source relational database management system to store and manage large amounts of data and high levels of traffic.

Solution Highlights

- Efficiently managed and updated product information and other content. This helped reduce errors and improve the accuracy and timeliness of the information provided to customers.
- Provided a better customer experience with a neat UI and by providing accurate and up-to-date information about pharma and surgical products.
- Easily integrated with other systems, such as a customer relationship management system, and helped to streamline its operations and improve efficiency.

Globally Renowned Manufacturer Of Pharmaceuticals

Engineered a solution to accelerate batch release times and enable first-time right production.

Product Engineering

IoT

Regulatory Compliance

Automation

**Improved
Efficiency**

**Increased Data
Accuracy**

**Enhanced
Flexibility**

Solutioning

Challenges

- Manual processes and paper-based record-keeping are costly due to the need of additional labor, storage, and maintenance of physical records.
- With increasing regulations and compliance requirements in the manufacturing industry, a non-digitized system can struggle to keep up with changing requirements, leading to compliance issues.
- Collecting and analyzing data becomes challenging. This can lead to inaccurate data and a lack of transparency in the manufacturing process, making it difficult to identify and address issues.

Technical Spotlight

- Leveraged MongoDB to collect, store and manage the database.
- Used IoT sensors and devices to collect real-time data from the manufacturing process and feed it into the portal.
- Leveraged Node.js to support IoT development of MQTT protocol commonly used by IoT apps, making it easy to connect to independent and third-party services and prepare it for integration through multiple environments.

Solution Highlights

- Automation and digital tools reduced labor costs, eliminated paper-based record-keeping, and reduced the waste of resources, resulting in cost savings for the manufacturing operation.
- Provided greater control and visibility over the manufacturing process, ensuring compliance with regulatory requirements.
- Streamlined the manual processes, and collected and data in real-time. This reduced errors, improved efficiency, and increased productivity.

- Had difficulty in fetching insights and real-time insurance reports.

Technical Spotlight

- Deployed MS Entity framework for greater visibility into corporate performance.
- Experienced high flexibility and searching, sorting, and pagination with DataTables.
- Leveraged Dapper for speedy and efficient performance outputs.

Solution Highlights

- An intuitive platform with better alignment between teams and repeatable processes that save time and avoid uncertainty.
- Fully automated lead management, office management, production, and collection management system.
- Accurate and flawless real-time reporting system resulting in driving better lead conversion.

Digital Appointments

Solutioning

Challenges

- Difficulty for users to check doctors' availability and book clinic appointments manually consumed a lot of time.
- Manual methods to maintain patient records.
- Checking bed availability manually was a major concern for the clinic attendants.
- Lack of system that could send timely updates to patients and keep them informed of important updates.

Technical Spotlight

- ASP .NET MVC helped us minimize the development complexity and gain complete user control.
- Dapper helped us with rapid and efficient performance.
- Built dynamic templates with the help of Razor Engine.
- Simplified and streamlined content management with an intuitive CMS.

Solution Highlights

- A digital platform that enables users to check doctors' availability and book online patient appointments.
- Automated data management that incorporates patient health records, medication details, doctor assigned, etc.
- Checking bed availability online is brought to the user's fingertips.
- Automated and timely emails sent to the patients regarding their appointments and other important things in real-time.

Dental Chart
Soft Tissues & TMJ Evaluation

The dental chart displays two views of a patient's teeth. The left view shows the upper and lower dental arches with teeth numbered 11-18 and 48-45 respectively. The right view shows the upper and lower dental arches with teeth numbered 51-52 and 85-82 respectively. The chart includes various annotations such as green and orange circles on the teeth, and a red shaded area on the lower arch.

Selected: Teeth 43, 42, 44, 45, 41, 31, 32

Agile

Solutioning

Challenges

- The client lacked a centralized trading system and had communication barriers while connecting with manufacturers, dealers, medical and dental professionals.
- Absence of security regulators that could help in maintaining compliance in a highly regulated system.
- Poor patient-doctor communication and delayed services due to an unsystematic system.

Technical Spotlight

- Leveraged Node.js that enabled efficient performance and ensured the ability to scale smoothly.
- PostgreSQL helped in uplifting security and scalability in the long run.
- To reduce the development cost and get a fast application development experience, we leveraged the Express framework.
- Unix/Linux helped us in improving stability and reliability throughout the portal development.

Solution Highlights

- Provided the power and flexibility to every stakeholder over a single platform and helped them trade medical equipment.
- A compliance-centric and agile environment with baked-in security and regulatory.
- An automated system that ensures healthy communication amongst patient-doctor and allows patients to raise queries, get quotes, search and buy medical products online.

100%
Secure Payment

Solutioning

Challenges

- Lack of a robust and secured infrastructure for facilitating online payments.
- Absence of an intuitive, dynamic application that allows you to view prescription, care plan and appointments.
- Lack of intuitive features such as e-forms, teleconsultation, and language localization.

Technical Spotlight

- Leveraged Flutter - an open-source mobile application framework - to create expressive and visually attractive UIs, with a range of built-in widgets and the ability to create custom ones.
- Utilized SQLite - a light weighted database - that is easy to use and embed with mobile applications and manage the database ecosystem.
- Integrated SecurePay to process a safe and secure payment transactions.

Solution Highlights

- AI-enabled robust chatbot is integrated with the ability to diagnose symptoms anywhere, anytime. If the symptom requires it, patients can communicate with the clinic using a single click.
- Integrated a payment API to purchase health procedure guides on the app.
- Developed an intuitive, dynamic application that is easy for users to navigate through.
- Integrated language localization for a wider reach of audience.

Solutioning

Challenges

- Difficulty to create the teleconsultation feature utilizing Twilio, which featured capabilities such as managing recording of teleconsulting sessions and integrating pharmacy and lab test modules.
- Absence of Sokcet.io to develop a smart built-in chat application.

Technical Spotlight

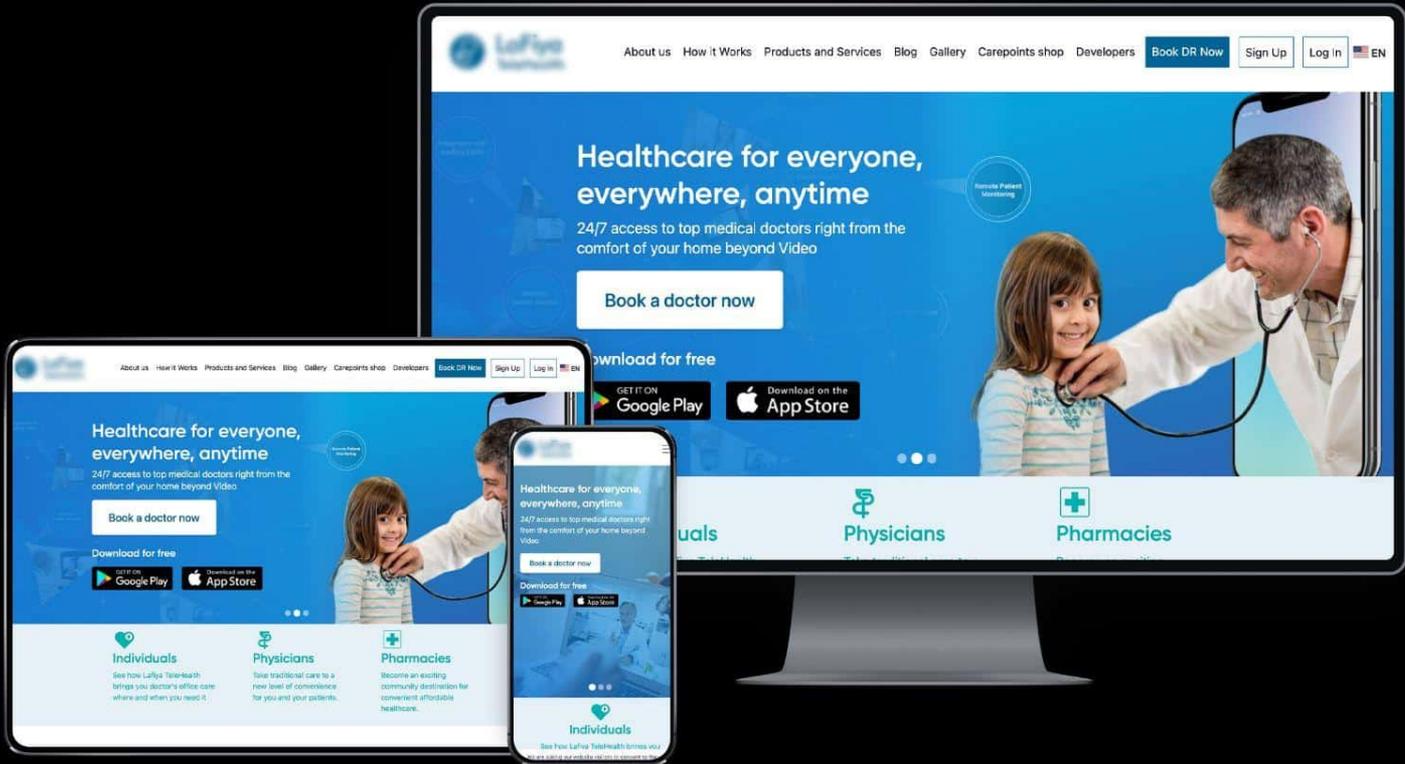

- Leveraged Node.js as a back-end framework along with Angular as a front-end framework to develop dynamic web pages.
- Leveraged MongoDB to manage the database ecosystem.
- Utilized Twilio - a third party component as a customer engagement platform to build unique, personalized experience for users.

Solution Highlights

- Language Localization entails creating web pages in several languages in order to gauge user interest regionally.
- Excellent intuitive, dynamic website design for a satisfied user experience.
- Created a built-in AI-enabled chat application to provide users with quick replies.

Solutioning

Challenges

- Medical professionals are burdened with administrative work preventing them from attending to more patients.
- Patients end up losing out on time with their physicians due to regulatory burdens.
- Traditional, paper-based practices result in waste and inefficiency.

Technical Spotlight

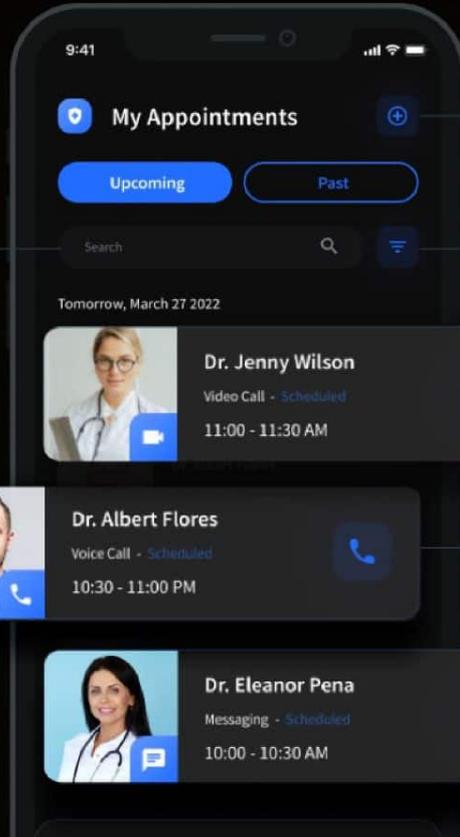

- Leveraged Ruby on Rails to develop the back-end and boost productivity and increase security of the application.
- Used PostgreSQL for secure data storage, facilitating rapid processing and flexibility.
- Integrated Heroku to ensure seamless connectivity between patients and medical professionals to connect via video or chat and share images or videos.

Solution Highlights

- Elimination of numerous paper-driven tasks for medical professionals.
- Quick and simple appointment scheduling and billing for patients.
- Medical professionals can use their personalized dashboard to efficiently manage appointments, payments and prescribing medication.

Cloud Enablement

**Reduce Insurance
Payment Retractions**

**Reduce
Malpractice Risk**

**Boost Profile On
PCP Dashboards**

Solutioning

Challenges

- The client wanted to bridge the gap of personalized concierge for patients where finding the right surgeons was essential.
- Absence of an interesting and innovative UI design.
- The client desired to eliminate any doctor-related issues, such as practitioners' HTRUST certification.

Technical Spotlight

- Leveraged iOS Swift - a powerful open language - that helps build amazing apps with it's robust and intuitive programming language.
- Google APIs are application programming interfaces (APIs) created by Google that enable communication with Google Services as well as their integration with other services.
- Integrated chat API - an application programming interface that gives access to cloud-based infrastructure and functionality for building scalable real-time chat experiences.

Solution Highlights

- Surgeons receive notifications of new surgical cases through the app and can review med records and imaging on this HIPAA-compliant platform.
- Patients choose their surgeon based on cost, surgeon's outcomes and convenience.
- Added the chat functionality allowing surgeons and patients to easily communicate with one another.

A Revolutionary Health App Boosting Immunity And Wellness

Enhanced Healthcare App with Immunity Boosting Features and Dozee Integration.

Advanced Features

API Integration

Data Visualization and Customization

Dozee Device Integration

Expanded Services

**Enhanced User
Experience**

**Data-driven
Insights**

Solutioning

Challenges

- Designing a user-friendly interface for displaying Dozee-generated sleep and heart monitoring.
- To accommodate a growing user base and ensuring optimal performance in handling increased data influx.
- Ensuring the security and privacy of user data collected.

Technical Spotlight

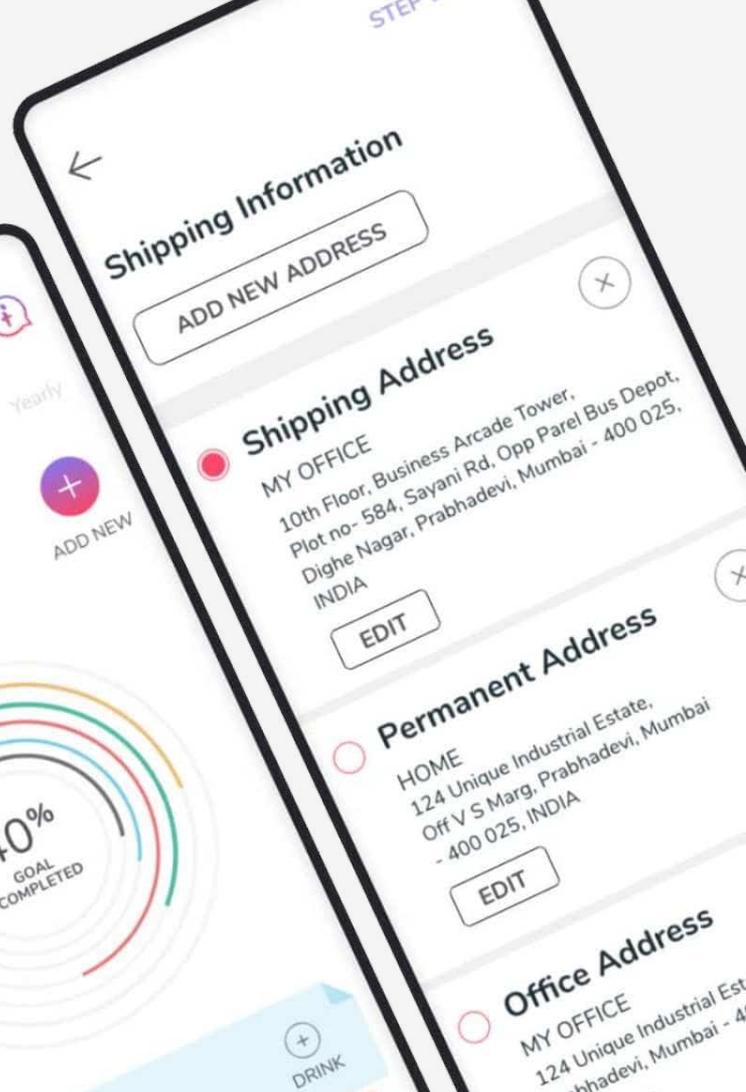

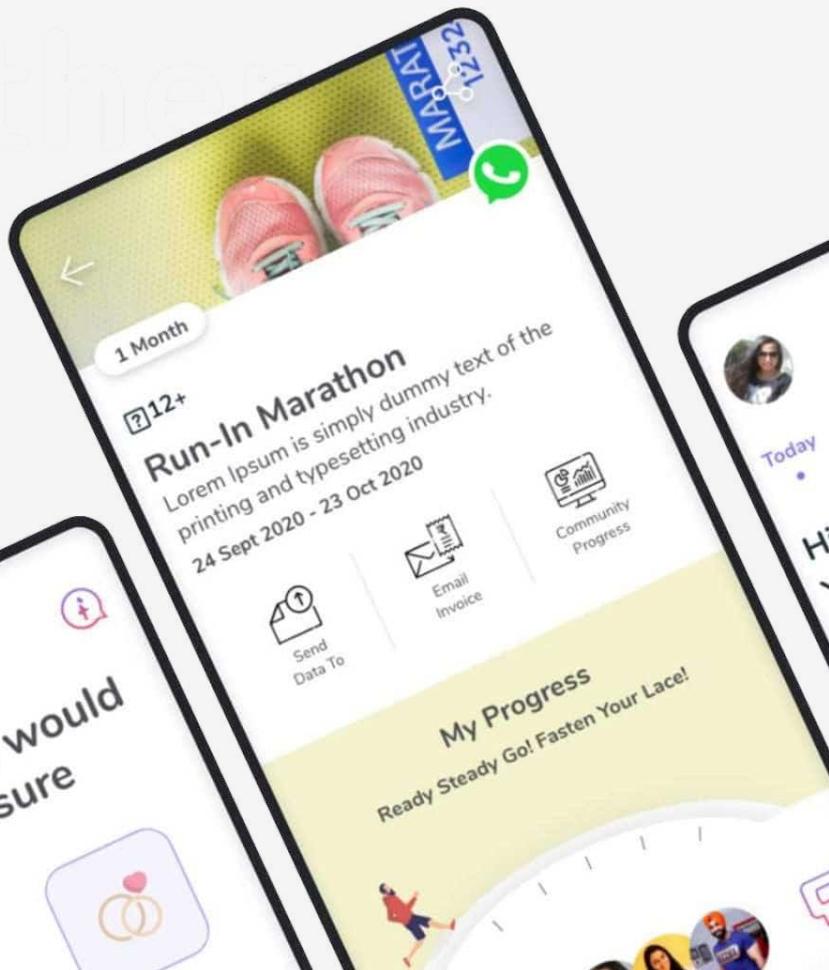

- PHP enables dynamic server-side processing for real-time interface updates.
- MySQL 5.0 ensured reliable and high-performance database management, handling large user data volumes while maintaining integrity.
- Laravel, a secure and reliable PHP framework, offered built-in security features such as CSRF protection, authentication, and authorization mechanisms.

Solution Highlights

- Collaborated with UX/UI designers to create intuitive data visualization techniques and user-friendly dashboards.
- Utilized scalable cloud infrastructure and databases, implemented caching, and optimised API calls to ensure app performance under heavy usage.
- Implemented stringent encryption protocols and access controls to safeguard sensitive health information.

A Pioneer In Redefining Remote Patient Monitoring

Utilized AI-powered remote monitoring to manage approximately 5 million people with chronic conditions.

Customization

AI

Algorithmic Patient Segmentation

**Efficient Patient
Stratification**

**Enhanced
Self-Monitoring**

**Patient-Caregiver
Collaboration**

Solutioning

Challenges

- Optimizing the cost and effort of monitoring a population of nearly 5 million individuals with chronic conditions.
- Providing tailored and effective solutions for various health conditions.
- Addressing data privacy concerns and ensuring accurate patient segmentation for targeted interventions.

Technical Spotlight

- Utilize AI remote monitoring for instant patient stratification.
- Utilized a range of clinically validated devices for the development of customized monitoring kits.
- Utilized anonymization techniques in algorithm training and applied trend-based segmentation.

Solution Highlights

- Deploy AI remote monitoring to instantly stratify and guide health coaches to high-risk cases.
- Customized monitoring kits for diabetes, hypertension, chronic obstructive pulmonary disease, and post-acute care.
- De Identified records in algorithm training and implemented trend-based segmentation for targeted interventions.

Book an Onboarding Meeting

Use the calendar below to book a 1:1 onboarding meeting with the Accuhealth staff.

Accuhealth Onboarding

Onboarding with Accuhealth (15MINS)

🕒 15 min

Welcome to Accuhealth!

You are booking a video meeting with one of our onboarding specialists! This meeting will take no longer than 30mins and at the end of it:

The Largest And Most Comprehensive Medical Center In Israel

Revolutionized Radiology Workload with AI Integration for Swift Diagnosis of Life-Threatening Conditions

Performance Evaluation

AI

Time-Sensitive Diagnosis

**Reduction in Time
to Treatment**

**Diagnostic
Accuracy**

**Improved
Efficiency**

Solutioning

Challenges

- Ensuring quick adoption of the AI solution among radiologists.
- Exploring ways to expand the use of AI beyond critical cases and brain imaging to non-emergent conditions and additional modalities.
- Building and maintaining trust in AI decision-support tools.

Technical Spotlight

- Utilized advanced IT infrastructure and robust data security measures to deploy AI.
- Expanded AI applications to enhance diagnostics, improve image quality, reduce MRI time, etc.
- Utilized advanced AI technology to achieve a 96% accuracy rate.

Solution Highlights

- Deployed AI, leveraging advanced IT and data security, fostering innovation and collaboration between physicians and developers.
- Expanded AI to improve diagnostics, image quality, reduce MRI time, minimize radiation, and standardize reporting in various medical conditions.
- Created highly accurate AI solutions (96%), minimizing false positives to instill trust in radiologists.
